LG LED Bloc LSA Series

True Innovation Behind Simplicity

 Optimum Cable-less Installation

 Alpha 7 Intelligent Processor

 Dedicated Accessories

 Meeting Room Solution Compatibility

OPTIMUM CABLE-LESS DESIGN FOR SIMPLE INSTALLATION

The LSAA series is the innovative LED signage applying the cableless transmission technology with non connectors*. For up to UHD resolution with the 16:9 ratio, it does not require a cable connection between the cabinets to supply signal & power. Its block assembly design makes the LSAA series easier to be installed than before.

* Non Connectors: Connectors that use RF (Radio Frequency) to transmit and receive data between two devices.

* Based on P1.2, 16:9, UHD Resolution (8 x 8 Cabinets)

Cable-less Signal Transmission & Power Docking

POWERFUL PICTURE QUALITY

Alpha 7 Intelligent Processor

Optimized Image Quality with α 7 Intelligent Processor

The "Alpha 7 Intelligent Processor" applied to the LSAA series recognizes and analyzes the original content, optimizing the clarity and sharpness of the content for itself.

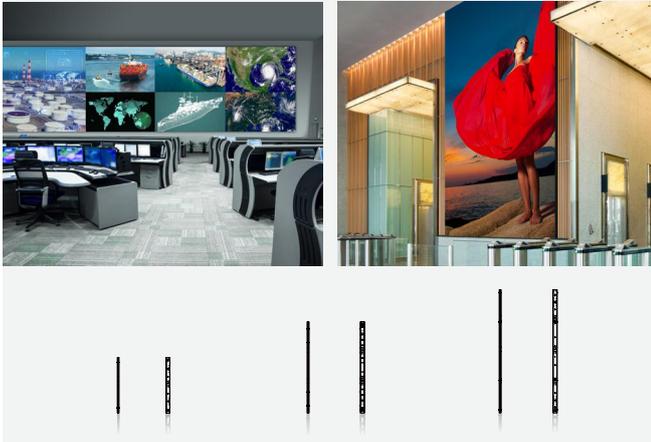

Vivid Color Expression Powered by HDR

With HDR (HDR10, HDR10 Pro*) support, content becomes vivid with great visual impact. The wider color spectrum and greater contrast ratio allow viewers to fully enjoy lively content.

* HDR10 Pro is LG's own HDR solution for processing HDR signal by using enhanced dynamic tone mapping.

OPTIMUM LED DISPLAY FOR ENTERPRISE USAGE

» Wall Mount Kit for Various Installation in Size

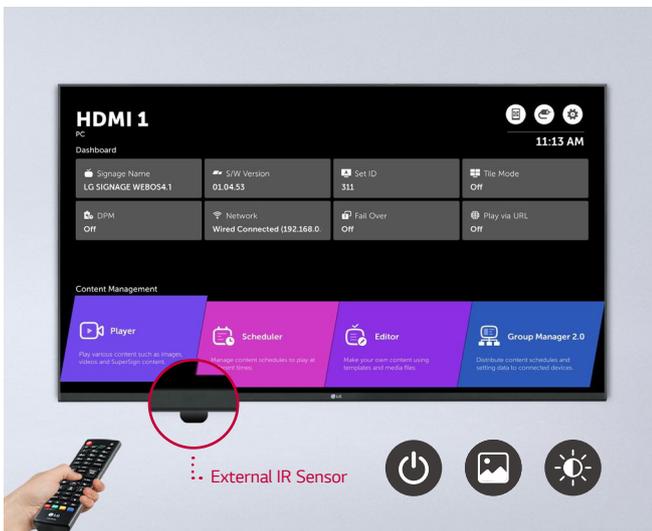

» Frame Kit for 16:9 Installation in FHD / UHD Resolution

Dedicated Accessories Available

The screen size can be easily expanded as desired using the dedicated wall mount kits. In addition, LG offers two types of frame kits for cabinet 4 × 4 (108") and 6 × 6 (163").

Easy Remote Control Support

The LSAA series allows users to easily access the settings, such as Picture Mode, volume, etc. by using a remote control instead of connecting to a PC. It uses the same UI as general LG digital signage, so users can easily adapt to it.

* The easy-viewing UI menu is available for over 1,280 × 720 resolution screens.

Compatibility with AV Conference Systems

The LSAA series has been certified Crestron Connected® for a high level of compatibility with professional AV controls to achieve seamless integration and automated control*, boosting business management efficiency.

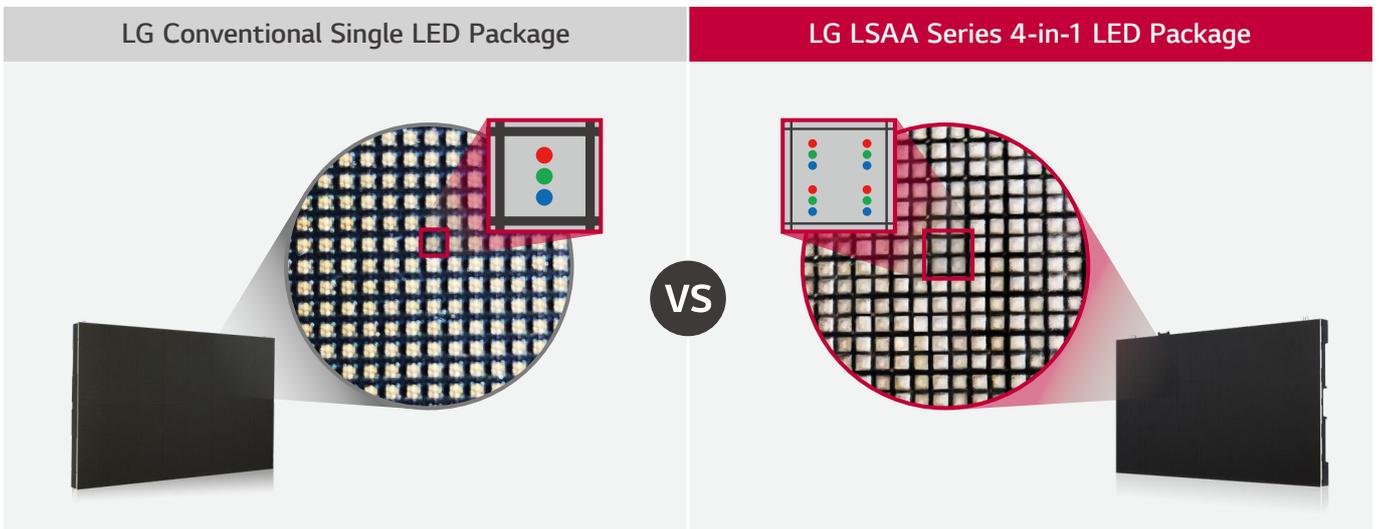

* Network-based control

DELICATE FEATURES CONSIDERING UP-CLOSE USE

EMC Class B Certified

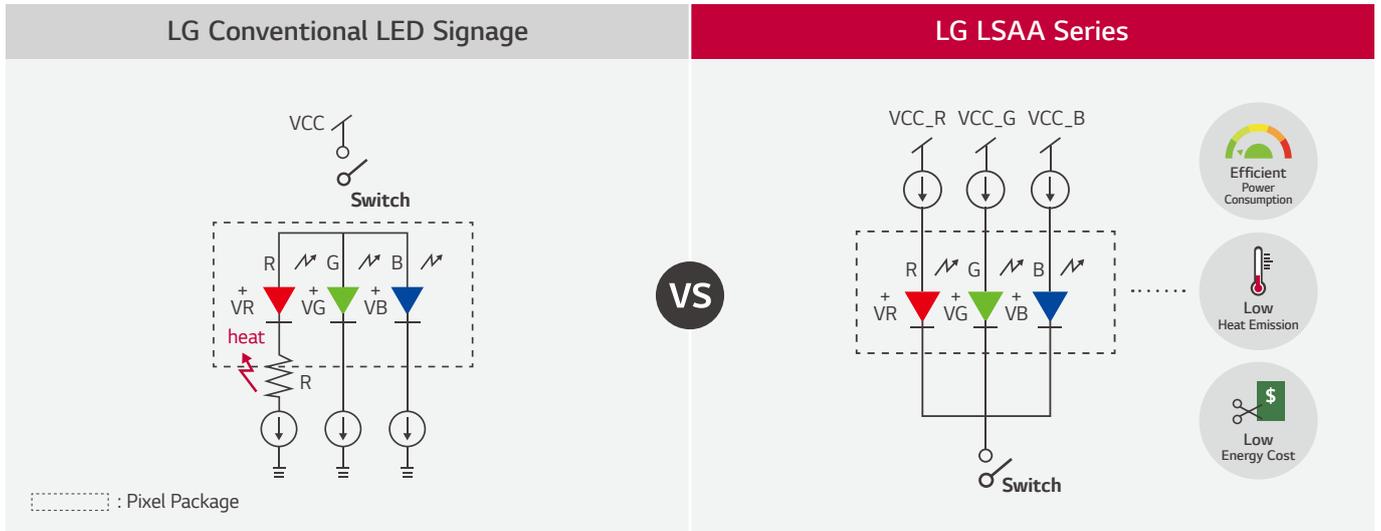

The LG LSAA series is certified as EMC Class B, which requires electronic equipment made for use in residential environments as well as commercial, industrial, or business environments. Therefore, it is suitable for up-close uses such as corporate meeting rooms, board rooms, etc.

4-in-1 LED Package

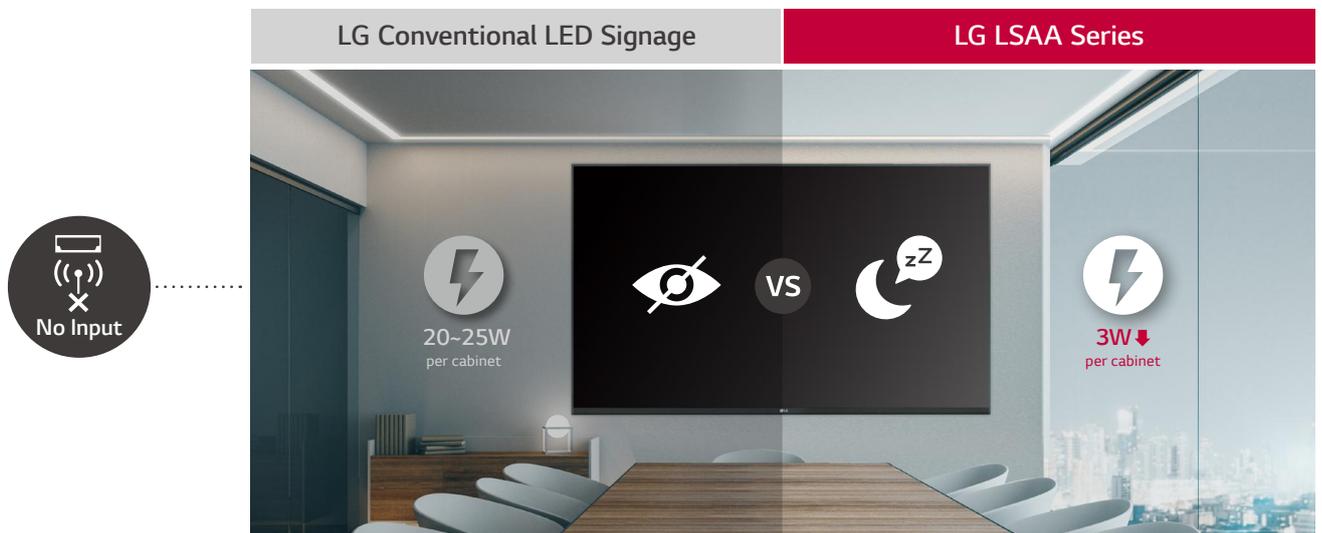

By adopting a 4-in-1 LED package in which 4 pixels are combined and integrated into one single LED package, the LSAA series offers better LED module protection. It is more robust to human touch than the conventional LED display.

ENHANCED POWER EFFICIENCY

Energy Saving Power System

By applying Common Cathode Drive-IC, LSAA series supplies the right necessary voltage to each R/G/B sub-pixel individually, ensuring efficient power consumption.

Standby Mode

When there is no input signal for a period of time, the screen turns off and the main circuit parts inside the LED cabinet go to a standby mode. This saves additional power consumption and enables the product to be reactivated simply by using a remote control.

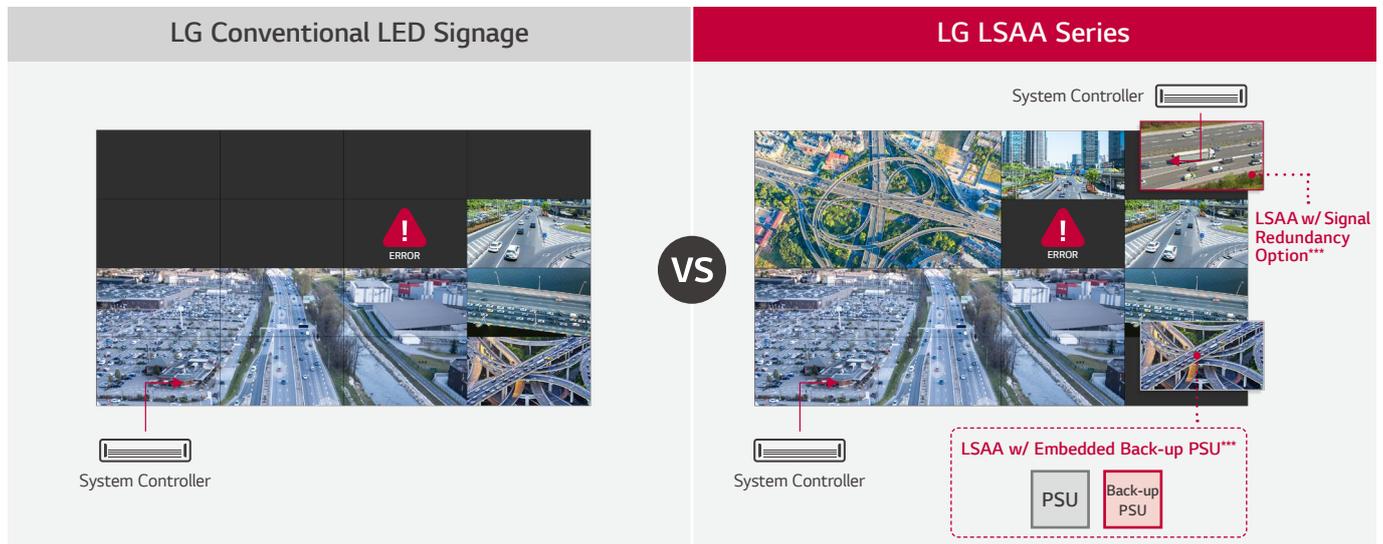

DELICATE FEATURES FOR OPERATION AND MANAGEMENT

Real-time ConnectedCare Service

Maintenance is easy and fast with the optional ConnectedCare* service, a cloud service solution provided by LG. It remotely manages the status of displays in client workplaces for fault diagnosis and remote-control services, enabling the stable operation of clients' businesses.

* ConnectedCare is the brand name of LG Signage365Care Service. The availability differs by region.

Power/Signal Redundancy Support

The LSAA series is designed to support redundancy of signal and power, providing users with comfort. With optional embedded back-up power supply unit and signal redundancy, customers can assure the continuous operation of the screen without power failure, while the dual controllers minimize screen failure with a bi-directional signal input.

* The "Conventional" shown above refers to LED displays which do not support the power/signal redundancy mode.

** The power/signal redundancy features are available from the fourth quarter of 2020.

*** The power/signal redundancy models are optional.
